moniq.

Spending,
Made Smarter.

AI-powered personal finance
for college students.

ACTUAL MONIQ DASHBOARD · SYNTHETIC DATA

Presenter: [edit name / team]

moniq.

College finances are unnecessarily complicated.

01

Money is scattered.

Bank alerts, spreadsheets, and separate apps.

FIND THE RECORDS

02

Tracking takes effort.

New income and purchases are easy to miss.

KEEP UP WITH ACTIVITY

03

Planning adds stress.

Shared bills, rent, and savings goals.

KNOW WHAT COMES NEXT

moniq.

One intelligent home for your money.

1 **Bring activity together**

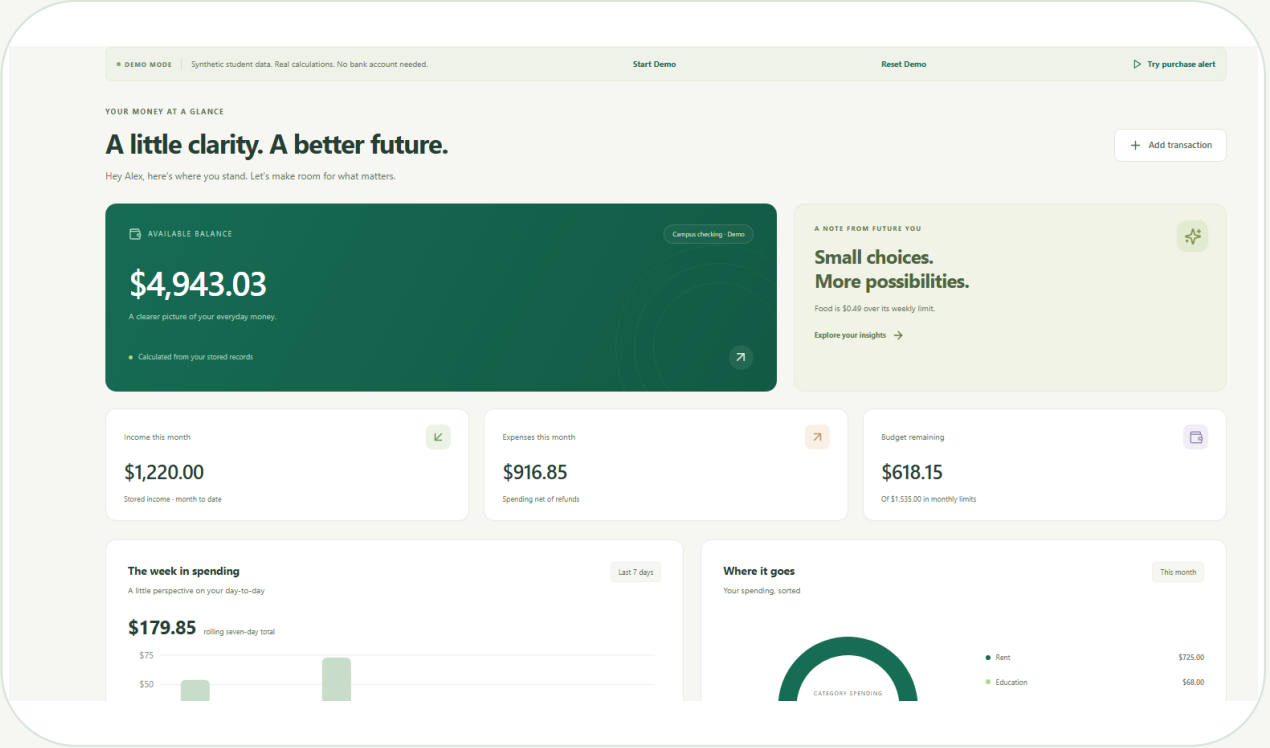

Gmail with consent · CSV imports

2 **Review and organize**

ML categories · Confirmed ledger

3 **Plan your next decision**

Budgets · Goals · Forecasts · Circles

Confirmed activity refreshes the dashboard.

moniq.

From an email alert to an updated balance.

SYNTHETIC DEMONSTRATION · ACTUAL PARSER + DATABASE UPDATES

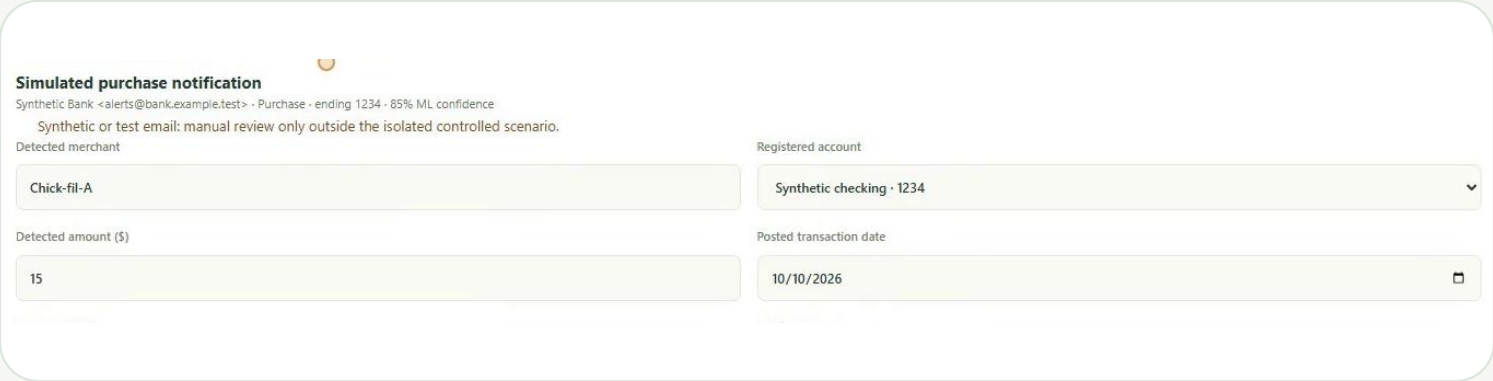

$10
Starting estimate

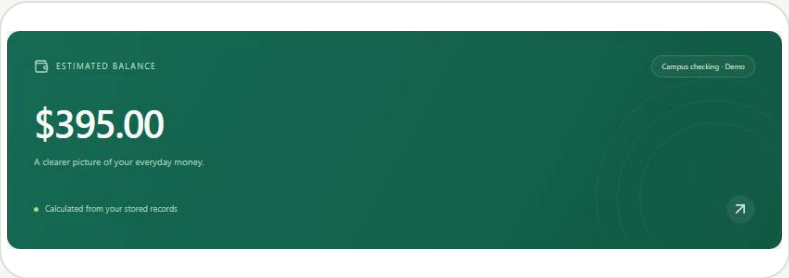

+ $400 →

$410
Paycheck confirmed

− $15 →

$395
Purchase confirmed

Detect → Extract → Categorize → Assign account → Confirm → Recalculate

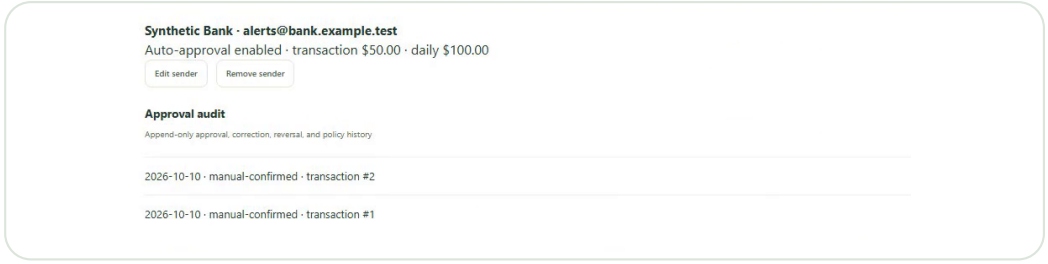

Gmail-derived balances are estimates, not verified bank balances.

moniq.

Automation meets everyday student life.

SmartApprove

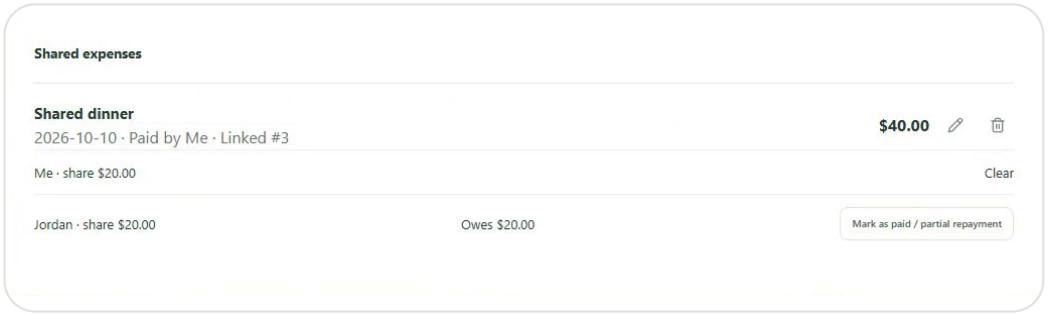

Your sender rules. Your choice.
Authentication + amount checks.
Uncertain alerts stay in review.

OPT-IN · OFF BY DEFAULT

Moniq Circles

Split expenses; keep the full charge.
Track personal shares and repayments.
Reimbursements are not paycheck income.

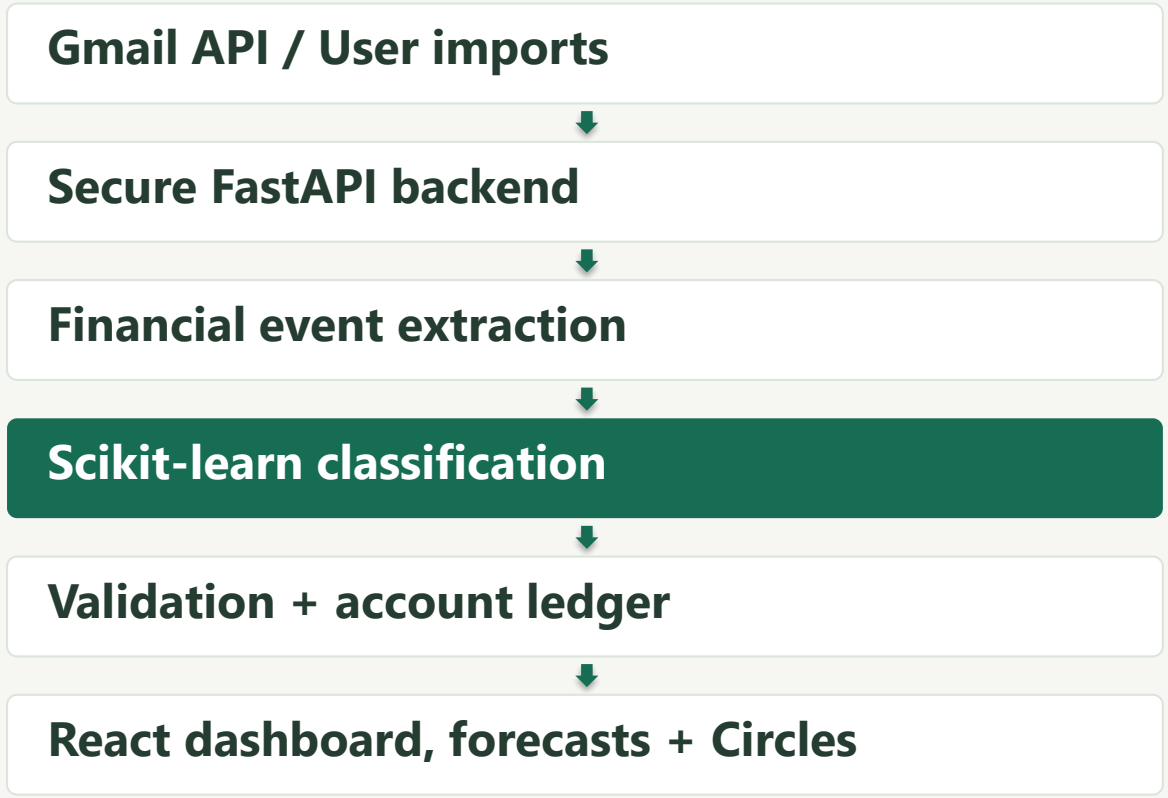

$40 dinner = $20 your share + $20 owed

Synthetic example. Circles records debts and repayments; Moniq sends no money.

moniq.

Real machine learning. Real financial logic.

ML suggests categories.

TF-IDF + logistic regression
94.70% raw synthetic accuracy

250 / 264 held-out examples.
Real-bank accuracy is unmeasured.

Code calculates the money.

Integer cents · Deterministic forecasts

React / TypeScript · Python / FastAPI · SQLite
Google OAuth + Gmail API · pytest / Playwright

Built, tested, and demonstrated.

109

Backend tests passed

pytest

19

Browser tests passed

16 local + 3 production · Chromium

94.70%

Raw synthetic ML accuracy

250 / 264 · Held-out merchant families

Verified prototype

Responsive dashboard and budgets
Goals, forecasts, subscriptions, assistant
Synthetic email → confirmation → ledger
Sharing, repayment and session isolation

Clear boundaries

Estimates; no bank verification
Gmail requires permission
Real-email coverage needs broader testing
No payments; sample deals are fictional

Hackathon prototype · Not a production banking product

Make financial confidence accessible to every student.

Less bookkeeping. Clearer decisions.
Smarter savings. Easier roommate expenses.
